

Documentation for BudgetWise

1. Overview

BudgetWise is a simple web application that allows users to track their expenses, categorize them, and monitor their total spending in real-time.

2. Features

- **Add Expenses:** Users can add expenses by entering a description, category, and amount.
- **Expense List:** View a list of all added expenses, with their description, category, and amount.
- **Delete Expenses:** Remove individual expenses from the list.
- **Total Spending:** Automatically calculates and displays the total amount spent.

3. File Structure

- `index.html`: Contains the main structure of the web application.
- `style.css`: Provides the styling and layout for the user interface.
- `script.js`: Handles the dynamic functionality, including adding, deleting, and calculating expenses.

4. Technologies Used

- **HTML:** Used for defining the webpage structure and content.
- **CSS:** Used for designing the user interface, making it visually appealing and easy to navigate.
- **JavaScript:** Implements the core functionality, such as expense management, dynamic updates, and interactions.

5. Usage Instructions

1. **Adding an Expense:**
 - Enter the details of your expense, including the description, category, and amount.
 - Click the **Add Expense** button to add the expense to the list.

2. **Viewing Expenses:**

- All added expenses will be displayed in a list, showing the description, category, and amount for each expense.

3. **Deleting an Expense:**

- To remove an expense, click the **Delete** button next to the corresponding item in the list.

4. **Viewing Total Spending:**

- The total spending will be automatically updated and displayed below the expense list.

6. **Code Explanation**

- **HTML:** Defines the layout of the app, including the form for entering expenses, a section for displaying total expenses, and a list for showing individual expenses.
- **CSS:** Provides styles for the app, ensuring it is visually clean and user-friendly.
- **JavaScript:** Implements the functionality:
 - Captures form data and adds it to the list.
 - Calculates the total spending dynamically.
 - Handles the deletion of expenses from the list.

7. **Future Enhancements**

- **Data Persistence:** Save expenses in local storage or a database to retain data between sessions.
- **User Authentication:** Add login functionality to allow multiple users to track their own expenses.
- **Advanced Analytics:** Implement charts to visualize spending patterns and trends.
- **Mobile-Friendly:** Optimize the layout for better viewing on mobile devices.
